Louisville, MS 39339  
www.winstonplywood.com

To whom it may concern

**Subject:** Compliance with section 93120.2 of the Airborne Toxic Control Measure for Formaldehyde Emissions From Composite Wood Products (“ATCM”) recently enacted by the California Air Resources Board (“CARB”) at 93120-93120.12, Title 17 California Code of Regulations.

Dear Customer:

This letter is intended to address the above mentioned matter. In response to this question, the ATCM does not apply to the plywood manufactured at Winston Plywood & Veneer in Louisville, Mississippi. The product we manufacture is exempt since it is specified in the Voluntary Product Standards referenced as PS 2-04. Section 93120.1(a)(8) of the ATCM states as follows:

“Composite wood products” means hardwood plywood, particleboard, and medium density fiberboard. “Composite wood products” does not include...structural panels as specified in Voluntary Product Standard – Performance Standard for Wood – Based Structural Use Panels(PS 2 – 04)...

Plywood products produced by Winston Plywood & Veneer are third-party certified by PFS-TECO, which complies with product standard PS-1 for all certified plywood products. For this reason the plywood we manufacture has been CARB approved as phase 2 compliant for formaldehyde emissions.

Please call if we can be of further service in this or any other matters of concern with our products.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mike Creely", is written in a cursive style.
